

Saikumar K

Azure DevOps Engineer

Kotrangisaikumar668@gmail.com | +91-9392441048 | Hyderabad | linkedin.com/in/saikumar-kotrangi

CAREER OBJECTIVE

Motivated and technically enthusiastic Azure DevOps Engineer with 2.4 years of experience in CI/CD pipeline automation, Azure infrastructure management, and DevSecOps practices. A 2023 Data science graduate with strong Terraform, Docker, and Azure skills, eager to contribute to cloud engineering excellence. Passionate about automation-first thinking, continuous improvement, and growing into a senior DevOps engineering role.

TECHNICAL SKILLS

CI/CD

Azure Pipelines (YAML), GitHub Actions, Jenkins basics, Release Management

IaC

Terraform, ARM Templates, Azure Bicep, Ansible basics

Containers

Docker, AKS basics, Kubernetes, Argocd, Docker Compose

Azure Services

App Service, Storage, ACR, Logic Apps, Azure SQL, CosmosDB, Azure Virtual Machines,

Security

Key Vault, RBAC, Managed Identity, SonarQube, Trivy basics

Monitoring

Application Insights, Azure Monitor, Log Analytics, Azure Alerts, Dashboards, Prometheus, Grafana

Scripting

Bash, YAML, Python

Collaboration

Azure Boards, MS Teams, ServiceNow

PROFESSIONAL EXPERIENCE

Azure DevOps Engineer

Spsoft Pvt Ltd | Hyderabad | 2025 – Present |

Roles & Responsibilities:

- Build and maintain YAML Azure Pipelines for .NET Core and Python application deployments to App Service and AKS with health check validation and approval gates.
- Write and test Terraform HCL scripts for Azure resource groups, App Service plans, Azure SQL databases, Storage Accounts, Key Vaults, and Application Insights provisioning.
- Integrate SonarQube SAST and Trivy container image scanning as mandatory pipeline quality gates preventing vulnerable deployments from reaching production.
- Configure Application Insights monitoring dashboards with custom KQL queries tracking application performance and availability metrics.
- Implement Azure Key Vault secret references for pipeline variable groups across 10 repositories eliminating all static credential storage.
- Build Docker containerization scripts for legacy application modernization including multi-stage Docker files and docker-compose configurations.
- Create Azure Boards velocity dashboards, sprint progress charts, and deployment frequency metrics for project team reporting.
- Collaborate with senior engineers on pipeline debugging, Terraform state issues, and Application Insights alert optimization.
- Maintain comprehensive Azure DevOps Wiki covering pipeline design, Terraform usage guides, and team onboarding documentation.

KEY PROJECTS

Healthcare Management System DevOps

Domain: Healthcare IT | **Technology Stack:** Azure Pipelines, App Service, Terraform, Application Insights, Log Analytics, Azure Monitor, Key Vault |

Project Description: Implemented CI/CD pipeline automation and infrastructure provisioning for a healthcare management system supporting patient records, doctor scheduling, appointments, and billing. Focused on secure deployments, proactive monitoring, and log analysis to ensure compliance and high availability.

Roles & Responsibilities:

- Designed YAML pipelines for patient registration, appointment scheduling, doctor management, and billing microservices.
- Provisioned Azure App Service plans and monitoring resources using Terraform with environment-specific parameterization.
- Configured Log Analytics workspaces and Application Insights dashboards to track patient portal latency, appointment booking success rates, and billing transaction accuracy.
- Implemented automated slot swaps with smoke tests validating patient record APIs and appointment endpoints before production release.
- Built Azure Monitor alert rules for appointment booking failures, doctor schedule sync errors, and billing anomalies with automated escalation.
- Integrated Key Vault for sensitive patient data access tokens, doctor credentials, and billing system API keys.
- Automated log ingestion pipelines to centralize diagnostic logs and performance metrics for compliance reporting.
- Authored deployment runbooks covering healthcare system releases, maintenance windows, and rollback procedures for on-call support teams.

Outcome: Delivered secure and reliable healthcare operations with 99.9% uptime, reduced deployment errors by 30%, and improved patient appointment booking success rate by 25% through proactive monitoring, log analysis, and alerting.

▪ Associate Engineer

▪ AuroPro Soft Systems Pvt. Ltd. (Jan 2024 – may 2025)

Roles & Responsibilities

- Designed, implemented, and maintained Azure DevOps CI/CD pipelines using YAML for .NET and containerized applications across Development, QA, and Production environments.
- Managed Azure cloud resources including Azure App Service, Azure Storage Accounts, Azure SQL Database, Azure Container Registry (ACR), Virtual Networks, and Azure Key Vault.
- Designed and automated application deployments using Azure DevOps Release Pipelines with deployment approvals, deployment slots, and rollback strategies.
- Provisioned Azure infrastructure using **Terraform**, **Azure Bicep**, and **ARM Templates** following Infrastructure as Code (IaC).
- Managed Docker image builds, versioning, and publishing to **Azure Container Registry (ACR)** and deployed containerized applications to **Azure Kubernetes Service (AKS)**.
- Configured **Microsoft Entra ID** authentication, managed users, groups, Enterprise Applications, Service Principals, and Managed Identities for secure access to Azure resources.
- Implemented **Azure Role-Based Access Control (RBAC)** by assigning built-in and custom roles at the Management Group, Subscription, Resource Group, and Resource levels following the principle of least privilege.

▪ Key Achievements

- Reduced deployment time by **60%** through CI/CD automation using Azure DevOps Pipelines.
- Improved deployment success rate to **98%** by implementing automated validation, approval workflows, and rollback strategies.
- Enhanced application observability by integrating **Azure Monitor**, **Managed Prometheus**, **Grafana**, and **Application Insights**, enabling proactive monitoring and faster issue detection.
- Reduced Mean Time to Resolution (MTTR) by **40%** through custom **KQL queries**, Azure Monitor alerts, and centralized monitoring dashboards.

EDUCATION

Bachelor of Degree - DataScience | Giriraj Govt College, Nizamabad - Nizamabad | 2023
